HIGH QUALITY PRODUCTS & STANDARDS

SCANDINAVIAN EXPERTISE

Nordic Wood is a family owned business specialising in made to measure log cabins. Within our group of companies we have been designing, building and constructing log buildings for more than 25 years. Nordic Wood strives to maintain the art of building log cabins set out in Scandinavia for generations, whilst utilising the latest building techniques.

From our experience and from listening to clients we have created a range of standard log cabins suitable for most gardens. The pent (flat) roof range is designed to fall under the UK permitted building rights so the need to seek planning permission is removed in most cases.

QUALITY IS KEY

Our commitment to quality shows in tightly constructed and easily assembled cabins. Our distinctive double interlocking corner system made from beautifully finished and smoothly planed pine logs add an air of sophistication to traditional country charm. Upgrade features of insulation in the floor and ceiling, thermal glass windows and solid wood doors are available ensuring our cabins become energy efficient, low maintenance and surprisingly affordable.

FULL SERVICE CONCEPT

Your log cabin experience will rely on our professional knowledge and our comprehensive list of services. We will work closely with you to help you decide on the best size cabin for the project and provide you with technical drawings for your approval. The finishing touch will come from our association with Norway's leading wood treatment manufacturers for both internal and external timber and safety precautions can be added by use of our fire protection range. Build the ideal package for your home office, guest room, summer house or garden room with confidence.

OUR LOG CABIN KITS FEATURE THE FOLLOWING:

- Kiln dried timber, the best logs available in 45mm & 70mm pine wood and 65mm engineered timber in spruce and real oak.
- Double tongues and double grooves for sturdy construction and energy efficiency.
- Precut and notched for added ease of installation
- Environmentally friendly from a fully sustainable material.

NATURAL OAK STUDIOS - *Luxury Collection*

As the only producer in the UK, Nordic Wood is proud to offer this unique garden studio in a laminated natural oak log. Oak wood has a density of about 0.75 g/cm³, great strength and hardness, and is very resistant to insect and fungal attack because of its high tannin content. It also has very attractive grain markings. Our REAL OAK STUDIOS will add a real "wow factor" to your garden.

PENT ROOF FOR PERMITTED BUILDING RIGHTS

We have designed these cabins to make the most of the permitted development rights for garden buildings. The general rule is that if a cabin is closer than 2 meters from any boundary it has to be kept under 2.5 meters in height. The rule also states that one can build up to 30sqm without having to comply with UK building regulations, if not intended for sleeping purposes. See www.planningportal.gov.uk

In order to keep the roof leakage proof we use a vulcanised rubber roof with a 15 years guarantee on all our pent roofs.

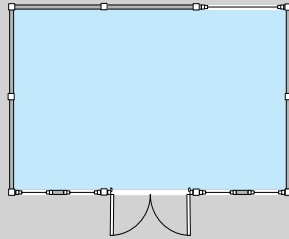

Don't forget that we specialise in made to measure so you can design your own perfect cabin!

All images are for viewing purpose only. Exact what is included in cabin model is stated in the specifications.

NORDIC WOOD SERVICE

Foundations

Our garden range requires a simple foundation. We recommend one of the following:

Full concrete foundation

Slab foundation

Strip foundation

Our building team can help you build these types of foundations. Please request a quote.

Electrics & Plumbing

Our Nordic Wood trained building team will happily work together with electricians and plumbers and accommodate for their requirements. If you don't know a plumber or electrician then we have a list of suitable companies we can recommend.

Site visits

Our free home site visit service is the first step in helping you achieve the perfect garden room for your needs. We discuss in detail the range of products available within your budget and need. We then work with you to establish the best layout and position in the garden. During our site visit we also take full measurements and work out site access etc to prepare for a smooth installation or delivery.

Designs and Technical Drawings

Once your order is confirmed and your deposit is received we will produce a floor plan as well as elevation drawings. This will outline all the details such as element chosen. Once you have given go ahead we start producing the cabin.

Manufacture

All our garden cabins are produced combining the best of modern manufacturing methods with traditional craftsmanship. We source the raw material from the best producers that offer quality and expertise in handling wood. Quality checks are undertaken at every step of the process from the assessment of the raw materials to despatch of the finished cabin.

Installation Service

Our Nordic Wood Building Team has been trained in Scandinavia to maintain the level of quality we stand for. We always quote separately for the installation and it is up to you if you want our help building your cabin.

Warranty

The different elements of a Nordic Wood cabin have different levels of warranties. For example the vulcanized roof we use has a 15 year guarantee. You should get many years of use out of one of our log cabins, if treated as recommended by us. We have churches in Scandinavia built in logs that are over hundred years old - it's all down to the love and care you put in since wood is a live material.

Customer Care

From the first moment you contact us, our goal is to deliver an efficient, friendly and professional service. We encourage all our customers to enjoy the experience.
